

ABOUT TRAP-NEUTER-RETURN (TNR)

the **PROBLEM...** It's estimated that **tens of millions** of feral and stray cats freely roam the streets of the United States and breed rapidly!

Doing nothing and using ineffective approaches are what have resulted in the current overpopulation problem. Trying to rescue all of the feral cats and find them homes is impossible given their numbers and their limited socialization. Removing or relocating all of the feral cats invites new unneutered cats to move in and the cycle of reproduction starts again.

the **SOLUTION...**

Trap-Neuter-Return (TNR) is the **only method proven to be humane and effective** in controlling free-roaming cat population growth. TNR is about:

- + Population control and **permanently reducing** the number of cats in an area
- + Lowering cat intake into shelters, thereby **lowering shelter euthanasia rates**
- + **Reducing the spread of disease**
- + The returned, spayed/neutered colony **guards its territory**, discouraging unneutered cats from moving in and beginning the cycle of overpopulation anew

What's the difference?

STRAY CAT

A tame cat who has become lost or has been abandoned; she has been socialized to people at some point in her life.

FERAL CAT

A cat who has little contact with humans, is fearful of people and usually lives on her own outdoors.
